Benefits of the projects, Nov 2025 to 28 October 2026 and in progress

120 projects: 54 live (in use) and 66 in progress. The focus is money, FTE and turnaround time (TAT), and the productivity they bring. Each figure is marked STATED (quoted from the project list) or DERIVED (worked out with the estimator's standard costing).

MONEY DERIVED

₹17.5 Cr

external cost avoided by the 54 live projects: built in-house for ₹21.0 Cr against ₹38.5 Cr from a software company (45% lower). All 120 projects: ₹34.7 Cr (44%).

FTE STATED

up to 99.2% less effort

Report preparation: 4-5 hours down to 1-2 minutes. Non-prime slab identification: 7 man-days down to 1 man-day, 6 man-days saved each time. At 2,740 hours per FTE, 57 slabs a year equal 1 FTE; so do 691 reports a year.

TAT STATED

up to 99.9% faster

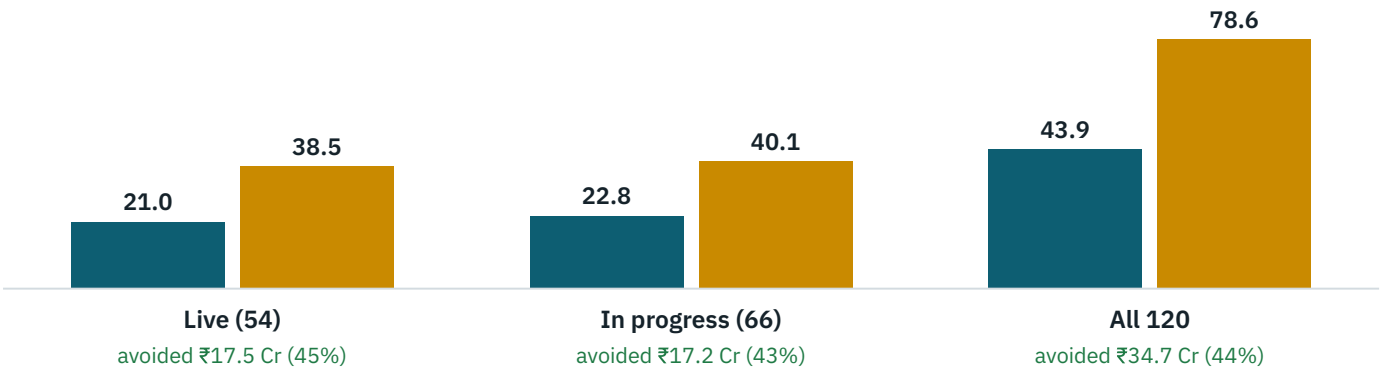

Coil tracing 160 minutes → 10 seconds. SCM commitment report 4 days → 3 minutes. Quality KPI capture 3 days → 1 hour. Manpower distribution 5 hours → 1 hour.

PRODUCTIVITY AND EFFICIENCY STATED

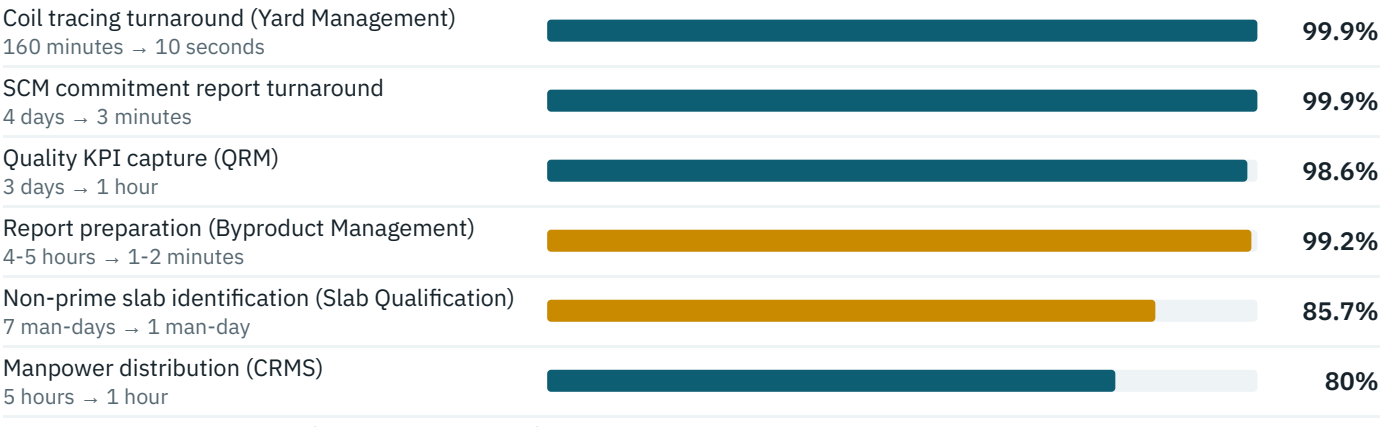

+70 t/day

blast-furnace production with the raw-material model (C-MARVEL), with production cost ₹615 per ton lower. Demurrage 30% lower with real-time visibility (Stowage Plan). DERIVED The in-house team's 13,783 person-days (40 FTE-years) avoided about ₹25,190 of external price per person-day.

Money: cost in-house against a software company, over 3 years (₹ Cr)

Time and effort: reduction each time the task runs STATED

Stated in the project list: per time the task runs

Project	What	Type	Before	After	Reduction	1 FTE equals	Status
QRM	Quality KPI capture	TAT	3 days	1 hour	**98.6% less**		In use
CRMS	Manpower distribution	TAT	5 hours	1 hour	**80% less**		In use
Slab Qualification System	Non-prime slab identification	Effort	7 man-days	1 man-day	**85.7% less**	57 a year	Both
Byproduct Management	Report preparation	Effort	4-5 hours	1-2 minutes	**99.2% less**	691 a year	In progress
Yard Management	Coil tracing turnaround	TAT	160 minutes	10 seconds	**99.9% less**		In use
Commitment Report	SCM commitment report turnaround	TAT	4 days	3 minutes	**99.9% less**		In use
Stowage Plan	Demurrage	Money		30% lower			In use
C-MARVEL	Blast furnace production	Output		+70 tons/day			In use
C-MARVEL	Cost of production, Hazira	Money		Rs 615 per ton lower			In use

"1 FTE equals" = times a year the task must run for the saved time to add up to 2,740 hours; shown for effort savings only (TAT is elapsed time, not converted). "Both": the project appears twice in the list, once in use and once in progress.

Money, derived: what the projects cost against a software company DERIVED

Projects	Count	Person-days	FTE-years	Manpower, loaded	In-house, 3 years	Software co.	Avoided	%
Live (in use)	54	7,286	21.3	₹6.99 Cr	₹21.04 Cr	₹38.52 Cr	**₹17.48 Cr**	45%
In progress	66	6,497	19.0	₹6.53 Cr	₹22.84 Cr	₹40.08 Cr	**₹17.24 Cr**	43%
All projects	**120**	**13,783**	**40.2**	**₹13.52 Cr**	**₹43.88 Cr**	**₹78.60 Cr**	**₹34.72 Cr**	**44%**

The effort is the same on both sides (benchmark effort factor 1): the difference is the in-house rates, loadings and mark-up against a software company's. It is external price avoided, not cash released.

Largest avoided cost among the live projects DERIVED

Project	In-house	Software co.	Avoided	Benefit (project list)
C-MARVEL	₹1.64 Cr	₹3.79 Cr	**₹2.14 Cr**	Range of improvement: 3% to 5% in Blast Furnace 1. - 0.1% reduction in Al...
CBAM	₹1.13 Cr	₹2.52 Cr	**₹1.39 Cr**	The CBAM System provides route-wise carbon emission analysis to identify...
ECD	₹86.0 L	₹1.87 Cr	**₹1.01 Cr**	Correct Product delivery, Rework reduction
GPQS Online	₹73.4 L	₹1.55 Cr	**₹81.3 L**	Autonomous product quality clearance
L-2 system integration with G...	₹60.1 L	₹1.22 Cr	**₹62.3 L**	Autonomous product quality clearance

What the project list does not yet record

- No rupee gain (Cal-2) is recorded for any of these projects, and "Efforts Saving (man-hours)" is empty. Only 9 project entries (7 live) state a before and after figure.
- Yearly rupee, FTE and TAT totals need one number per project: how often the task runs (slabs a year, reports a day, users). With it, each stated saving converts directly: saved time × runs a year × cost per hour.
- 47 of 120 projects have no benefit text in the list at all. Asking project owners for volume and before/after figures would make the next report fully stated.

Basis. Scope: projects whose dates overlap Nov 2025 to 28 October 2026, plus every project marked In Progress (dated outside the period, or with no dates); failed projects left out; 70 of 190 projects left out. Costs are derived because the list holds none: one person per project (Senior for AI / ML / vision models, otherwise Mid; FTE where given), working days between the project's dates (90 days if a date is missing), 100 users, standard server and licences, default masters, 3 years of ownership; full project cost, not pro-rated to the period. A day of TAT is 24 hours; a man-day is 8 hours; 1 FTE is 2,740 hours a year. Reductions use the lower figure of a stated range.
